

The Angler Guitar Overdrive

The Angler Guitars Overdrive is a guitar overdrive pedal that is designed to give guitar players a maximum of tonal and overdrive flexibility. The three-control overdrive can be used as a clean high-end booster, a saturated smooth tube-like overdrive, and anything in between. The Angler also has a built in Line Driver that is always on to improve the fidelity of the signal path: long cables will no longer cause loss of high-end. This is one of the best overdrives available today.

Features

- Complete control of overdrive
- Ranges from slightly overdriven to super-saturated
- Wide tonal range - extreme flexibility
- Line driver improves signal integrity
- Accepts most 9V AC to DC adapters
- Extremely long battery life
- Yellow indicator when "Angler" is on
- Carling switches, Switchcraft connectors
- Hand-wired
- Rugged Green Teflon powder coat finish
- Made in the USA
- Aluminum box (2"x4"x1")

Operation

The Angler Guitar Overdrive arrives from Dredge-Tone ready to use, just connect a guitar to the input and an amp to the output, step on the foot switch, turn up the LEVEL and DREDGE controls, set the TONE where you like it, and play.

If you want to use an external power supply, either get a Dredge-Tone ultra-linear, distributed, regulated Pedal Board Power Source, or a standard 9V AC to DC wall supply with a 1/8" positive tip plug.

Price

\$200 US, plus tax for CA residents
